REM is a leading manufacturer of Storm Water Filtration Systems to **meet current and future Clean Water Act** requirements. Our foundation is in the design and manufacture of large interceptors for storm water, grease, sand and oil. We have continuously pursued and created **better technology** in both filtration and comprehensive maintenance for the many different systems available today.

Optional Antimicrobial Media Pak, which adds the prevention of bacterial growth and the protection against odor-causing water borne pathogens to our current media.

REM provides Best Management Practices (BMP) compliance systems for your Water Quality Management Plan (WQMP) and your Storm Water Pollution Prevention Program (SWPPP).

TRITON Filtration™ Systems

REM developed the TRITON Filter™ System as an **economical solution** for the removal of hydrocarbons and other contaminants (sand, silt, litter/trash, paint, petroleum products, animal fats, food) from storm water runoff. All our products meet **NPDES Phase 2** and comply with the Federal EPA criteria of using the Best Available Technology (**BAT**) for use in Storm Water Best Management Practices (**BMP**).

Applications and Customization

Service and Recycling Programs

REM's storm water filter design uses an **environmentally safe** absorbent media which is disposed of in accordance with all applicable laws for petroleum waste. We participate in an approved **recycling program** that separates and recycles the oil and absorbent, **reducing liability** for the customer and **decreasing landfill use** while **protecting the environment**.

Shopping Centers

Development Projects -- Providing compliance measures during both construction and on-going operations.

Curb Inlet Protection: Replace sand bags with re-usable protection!

Durable Construction and a Five Year Warranty

REM products are made of non-reactive High Density Polyethylene (HDPE) or High Impact Polystyrene, with ultraviolet inhibitors and rubber added for **increased impact resistance**. All our products can be **easily customized or adapted** to fit each customer's existing conditions.
